

STAINLESS TRIM FOR MODULAR FURNITURE

Veteran's Affairs Hospital
Washington DC

A VA Hospital in the Washington DC area wanted to install nurse stations that could weather the wear and tear these high-traffic environments typically experience. The customer liked the flexibility of standard modular furniture, but was concerned that it would quickly be damaged.

To provide a lasting solution that would optimize the hospital's investment, we created custom stainless-steel trim that could withstand the rigors of this demanding space and easily adapt when needs change.

The cladding is modular and attaches in nearly the same way standard product does but in a more secure fashion. When the time comes for a product upgrade it will be simple for an installer to switch the trim out, saving time and money, because there's no need to order a completely new station.
