

DESIGN FOR A BETTER PATIENT EXPERIENCE

Fort Carson Hospital
Colorado Springs, CO

Our mission is to deliver the exact solution clients are looking for. We partnered with a dealer in Colorado to build these stations for the OBGYN check-in area at the Fort Carson hospital in Colorado Springs.

These stations were built with finishes selected to complement in with the ancillary furniture and other finishes included in the facility. We used a backbone of systems furniture provide the power and data distribution. The furniture also features rail tiles that extend above the surfaces for accessory storage. Nova Monitor Kits conceal the monitors below the surface and facilitate better face to face interaction.

The design features durable Corian surfaces and transaction top, along with laminate cladding with curved ends to enhance durability and flow in the space. This station was one of many we provided to help upgrade this facility and promote a better patient experience.
