

CREATING A FUNCTIONAL WORKPLACE

Carlsbad Medical Center
Carlsbad, NM

The Carlsbad Medical Center was seeking a new reception desk, reception work area, and three private check-in suites for their existing lobby space. Our dealer partner recognized an opportunity to meet their needs with the support of StudioCraft's capabilities.

The main priority for the project was to create functional spaces for check-ins, ensuring privacy for patients and ease of use by staff. StudioCraft suggested the Agam Door System to seamlessly integrate with the walls and create privacy barriers. Additionally, we integrated modesty panels and ensured that the design would allow for power distribution through the desks.

To ensure a smooth and efficient installation, StudioCraft mobilized our team for field verifications to assess the existing space. This allowed us to confirm that everything could be fabricated off-site and then shipped for installation, minimizing disruption for the client.

The project successfully divided the space into separate areas, increasing the functionality of the reception area. This was achieved in a unique space that was already finished, showcasing StudioCraft's ability to creatively adapt spaces to meet our clients' needs.
