

PRESENCE AND PRECISION

Entertainment Company Headquarters
New York, NY

A global leader in gaming and entertainment was looking for a custom conference table with a strong visual presence that felt modern, while integrating functional elements needed for employee collaboration.

StudioCraft engaged in a series of design iterations to fine-tune the profile and ensure every element aligned with the vision. A primary focus was achieving the look of marble with a more consistent natural stone. We selected a surface from the ENVI Quartz collection that captured the elegance and texture of real marble. The base was finished in Chemetal laminate, giving the table a sleek, contemporary look.

For functionality, we integrated a perimeter power system just beneath the surface to maintain a clean look while providing easy access to outlets. The client also required a custom audio solution, which led us to incorporate in-table microphones, carefully placed to ensure clear sound for everyone seated.

To complement the table, our team also created a custom reception desk using similar finishes. The new piece replaced an outdated station, bringing a cohesive and modern look to the lobby.
