

MODERN WORKPLACE SOLUTIONS

Genentech
San Francisco, CA

StudioCraft created multiple custom pieces for spaces throughout Genentech's Bay Area facility, delivering bespoke solutions that balance durability, functionality, and design.

In the breakroom, we crafted a central island clad in Delta Millworks hemlock cladding and topped with Cambria's Big Sur quartz countertops. This element includes under-cabinet power, and pull-out drawers for trash and recycling, and an integrated stainless steel planter.

Using the same materials for the front desk, our team incorporated integrated lighting and height-adjustable tables with access panels for power. The reception desk was thoughtfully designed for efficient installation on site.

Live edge oak tables, equipped with discreet power outlets, were distributed throughout the facility, adding warmth and texture while supporting employee needs for additional workstations. Each element reflects a commitment to purposeful, effective and beautiful work environments.
