

NEXT-GEN INFORMATION DESKS

Denver International Airport
Denver, CO

StudioCraft partnered with a furniture dealer to produce new information stations for the Denver International Airport, replacing outdated desks across the concourses. This airport-wide upgrade supports the airport staff as they serve 80 million travelers each year.

After multiple design iterations, StudioCraft finalized a solution built for durability and years of heavy public use. Customer service agents were directly involved in shaping the design to ensure the stations function exactly as they need.

Each material was carefully selected for both aesthetics and longevity: ENVI ZN porcelain, French Linen laminate, Formica Luna Sand solid surface tops, and metal corner guards.

Custom cabinetry, keypad-secured storage, and a streamlined layout support daily operations, while an illuminated "I," 3D lettering, and integrated screens improve visibility and wayfinding.

This project highlights StudioCraft's ability to deliver precise, efficient installations in high-traffic, high-security environments, enhancing the traveler experience at one of the nation's busiest airports.
