

EXCEEDING EXPECTATIONS

West Coast Children's Hospital
California

A facilities planner and designer at a West Coast children's hospital saw a registration desk by StudioCraft at a healthcare design conference and was inspired. They recognized it as an ideal solution for their project, which had both high aesthetic and performance requirements, and an aggressive project schedule.

The registration desk features a curved solid-surface profile that reflects the architecture of the new space. Integrated downlighting casts onto a textured 3form panel to create dimension and visual interest.

Built with durable materials custom-built around a modular frame, the desk demonstrates StudioCraft's hybrid approach to custom fabrication. Because the desk is fully fabricated off-site, our team was able to deliver a solution that required minimal on-site installation and could be installed at the very end of construction.

The success of the project has positioned this registration desk as a potential standard for future hospital applications and reinforced StudioCraft's ability to deliver high-quality, efficient solutions.
